

RADIO CONTROL - CONTINUED

SERVO :

The horn used on the device was identified as horn E

FSH-6E

RECEIVER : Very little recovered.

the following writing is embossed on a piece of wood frag

'-R102JF'

This is a photocopy of the exemplar receiver :

on the interior of this housing, "1087" is printed on exemplar.

One fragment of plastic from device reads "105_" this may correspond to "1087" on exemplar. Significance of this code is currently unknown

TAPE

Black electrical tape - 3/4 inch wide

Silver duct tape, fiber reinforced

WOOD

panelling 1/4" thick
two sided veneer on core
(from lab: possibility that one veneer
is red maple)

HARDWARE

nails used on box : 1" finishing nails

PAINT

black spray paint

- on search look for residue where it was used

ADHESIVE

clear or yellowish clear adhesive that dries hard.

possibly an epoxy or Elmers-type glue

Not silicone rubber or wood glue.

On search: recover adhesive, but comparison probably will only be identifying type of glue. Probably can't ID brand.

OTHER WIRE

In addition to the ^{small gage} black, red & white multistrand copper wire (part of RC),

also used in device was

- small gage ^{multistrand} tinned-copper wire with red insulation
- medium gage multistrand copper wire with red insulation.

MAGAZINE

Page of magazine recovered appears to be from weight lifting/muscle magazine

• one side primarily red & yellow graphics & writing w/ some black & white
can read

- "Powerlif"
- 'iron wor'
- 'World'
- 'werlifting'
- 'ng-free'

• reverse black printing on white
(possibly printed in columns)

can read

money
supplem
more sa
around.
are used

'food'

On search -

- look for any magazines or other printed material on weight lifting or body building
- any magazine with a page ripped out
- note magazines present so it can be determined

MAGAZINE

Page of magazine recovered appears to be from weight lifting/muscle magazine

- one side primarily red & yellow graphics & writing w/ some black & white
can read

" Powerlif "
 ' iron wor '
 ' World '
 ' werlifting '
 ' ng-free "

- reverse black printing on white
(possibly printed in columns)

can read

money
 supplem
 more sal
 around.
 are used

' food '

BLASTING CAPS

Austin Rockstar - Two were recovered

description : Aluminum shell
red plug
red & yellow single strand copper wire

- for search
 - shunt = red spaghetti tube (used only by Austin)
tube of red plastic ~ 2" long & 1/8" diameter
 - bundle wrapper (used to hold hank of wire together)
short strip of paper with staple
printed "Austin"
 - Also look for cut red & yellow wires
stripped wire insulation
wire strippers (may have residual
insulation)

• Delay tag

EXPLOSIVES

Dynamite unknown brand and type (eg. gelatine dynamite, permissible dynamite)

possibly 2 or 3 sticks

dynamite wrappers are usually tan waxed paper

• for search -

The components of dynamite leave a characteristic residue which is easily recovered from any surface where the dynamite was handled or stored. The residue can remain for months & can be detected at extremely low concentrations.

To sample → either cut out substrate
or swab
and place in vapor tight container
e.g. paint can

BATTERIES

Five 9 V Duracell batteries
marked "BEST IF INSTALLED BY
JUL 94"

Three AA Duracell batteries
"BEST IF INSTALLED BY JUL 94"

RADIO CONTROL - FUTABA

The red & black multistrand wire recovered may
be from battery holder,
The battery holder is from Futaba power
source.

The battery holder held 4 AA batteries

Duracell AA batteries:

AA battery fragments were present in exh 8,
and Exh 15 seat 6 batteries, Exh 15 seat 1 battery component
Exh 33.

* Fragments of (4) batteries were present:
this is based on the following section of wrapper
which is present only
once on each wrapper.
4 were present.

DURACELL®
MN1500 1.5 VOLTS
CONNECT IMPROPERLY
OF IN FIRE, BATTERY
MADE IN U.S.A.

In addition:

Three casings were present (two w/ the negative terminal
present), and 2 negative terminals.

Three wrappers had the following markings: ^{BEST IF}
"BEST IF INSTALLED BY"
JUL 94

The wrapper fragments for one battery could be
pieced together so the following embossed
code could be deciphered:

AL0112

↑?
this character is on a fracture
line and only part can be read.

Duracell 9V batteries

9V battery fragments were present in Exh 15 seat 6 battery, Exh 15 seat 1 battery components, Sub 1 exh 24, Sub 3 exh 39, Exh 14 battery component, Exh 15 seat 13 battery fragments, Exh 20 seat 4 battery components, Exh 25 battery components, Exh 28 battery components, ~~Exh 8~~

Each 9V battery contains 6 cells.

23 cells were recovered → ~~approximately~~ 4 9V batteries

* Fragments of (5) 9V batteries are present. This is based on the section of the casing where the following info is stated:

BEST IF INSTALLED BY
JUL 94

On 4 of the casings the date is clear, one 1 only 'JUL' is clear.

< The sides of the battery casings in many cases have adhesive present in a roughly rectangular area. The sides of the batteries may have originally be glued together.
